Description

POS2003 – Positive Psychology

Positive psychology was introduced by Martin Seligman around 2000 and can be viewed as a supplementary approach to clinical psychology. The positive psychological movement formulated three aims: (1) to focus on well-being and happiness instead of abnormal behaviour and psychopathology, (2) to be concerned with building positive qualities and strengths instead of repairing damage and (3) to prevent future problems instead of correcting past and present problems.

The course will start with a general introduction to the field of positive psychology. The main concepts will be introduced and clarified, and an overview of the results of happiness studies will be presented. In subsequent meetings, various more specific topics will be discussed by means of lectures and group discussions. There will be ample room to gain hands on experience with positive psychological techniques ranging from simple journaling exercises to mindfulness meditation. A scientific evidence-based approach will be leading. We will provide participant with the tools to be able to evaluate and design research in the area of positive psychology, but also with the skills to apply some (basic) intervention techniques.

The instructional approach will include lectures, interactive meetings, group discussions, practical workshops and student presentations. Final assessment will be by means of an individual paper on a topic of choice. On the last day of the course a student conference is held where each students presents his paper (review or research proposal) either by poster or through an oral presentation. Halfway through the course an abstract has to be handed in on the basis of which a selection of candidates for oral presentations will be made.

This intensive 3 week, 36 hour course includes field trips matching the course content during week days.

Disclaimer trips: trips and visits related to the course are conditional. E.g. Dutch travel advice should be positive regarding the region that will be visited and institutions should be able to accept visitors. In case a proposed trip or visit cannot continue due to circumstances, alternatives may be organized.

Disclaimer ECTS: the number of ECTS credits earned after successfully concluding this course is the equivalent of 7.5 ECTS credits respectively according to Maastricht University CES guidelines. Please consult with your home university or UM faculty if these credits will be accepted as part of your programme and, if necessary, converted to the credit system acknowledged by your home university.

Goals

This programme is intended to familiarise students with the concepts and ideas of positive psychology; provide in depth knowledge on selected topics within the field; be able to judge and design a positive psychological research project; and to give students hands on experience with some of the positive psychology intervention techniques.

Instruction language

EN

Prerequisites

This Positive Psychology course is a unique international study opportunity for psychology students. Maastricht's psychology faculty is world-renowned, and you will experience not only world-class instruction but get insight into what is internationally a truly 'hot topic'.

Recommend literature

Students are strongly encouraged to search for their own literature at the university library where they have a large number of relevant articles and books at their disposal. If you are interested in buying a textbook, we recommend one of the following (please note that it is not mandatory to buy one of these books. The books below are suggested readings):

Positive Psychology: Theory, Research And Applications by Kate Hefferon & Ilona Boniwell (2011)
ISBN-10: 0335241956 | ISBN-13: 978-0335241958

Applied Positive Psychology: Improving Everyday Life, Health, Schools, Work, and Society by Stewart I. Donaldson, Mihaly Csikszentmihalyi, Jeanne Nakamura (2011)
ISBN-10: 0415877822 | ISBN-13: 978-0415877824

Positive Psychology in Practice by P. Alex Linley, Stephen Joseph (2004)
ISBN-10: 0471459062 | ISBN-13: 978-0471459064

Teaching methods

• Assignments • Lectures • Papers • PBL • Presentations • Work in subgroups

Positive Psychology

Course Manual

Academic year 2022-2023 January

Chapter 1 Introduction

Opening

The question “what is wrong with people” has guided the thinking of many psychologists and dominated countless scientific studies during the 20th century. It is hard to deny that this entails an important question. In our attempts to answer the question, we have gained more understanding of many illnesses and have developed effective treatments for a wide range of problems. However, as an inevitable consequence of our focus on the negative aspects of well-being and health, such as distress and disease, we developed an almost exclusive attention to pathology. Scientific psychology focused disproportionately on pathology and repair, and devoted relatively little attention to factors that “make life worth living.”

As the 21st century unfolds, however, we are beginning to ask a different question: “What is right about people?” This question is at the heart of positive psychology, which is the scientific and applied approach to uncovering people's strengths and promoting their positive functioning. Positive psychology is about valued subjective experiences: well-being, contentment, and satisfaction (in the past); mindfulness, flow and happiness (in the present); and hope and optimism (for the future). At the individual level, it is about positive individual traits: the capacity for love and vocation, courage, interpersonal

skills, aesthetic sensibility, perseverance, forgiveness, originality, spirituality, high talent, and wisdom. At the group level, it is about the civic virtues and the institutions that move individuals toward better citizenship: responsibility, nurturance, altruism, civility, moderation, tolerance, and work ethic. Note, however, that positive psychology is not the focus of the positive at the expense of the negative. Positive psychologists recognize negative emotions, failure, problems, and other un-pleasantries as natural and important aspects of life.

Research on positive psychology aims to investigate what actions lead to well-being, to positive individuals, and to thriving communities. For instance, scientific studies attempt to gain more insight in what families’ factors contribute to children who flourish, what work settings lead to the greatest satisfaction among workers, what policies result in the strongest civic engagement, and how people's lives can be most worth living. In addition, research in the field of positive psychology seeks to unveil factors that contribute to the prevention of problems, such as depression, substance abuse or violence. What we have learned over 50 years is that the aforementioned pathology-based view on human functioning does not move us closer to the prevention of these serious problems. Indeed, the major strides in prevention have largely come from a perspective focused on systematically building competency, not correcting weakness. We have discovered that there are human strengths, such as courage, future-mindedness, optimism, and interpersonal skill that act as buffers against mental illness. An important mission of positive psychology is therefore to understand and learn how to build these positive qualities. With this knowledge, interventions can be designed that improve people’s wellbeing and help to promote the so-called “good life”.

Welcoming message

Welcome to Positive Psychology!

This course will provide you with valuable insights from the field of positive psychology to help you boost your resilience and lead a fulfilling and meaningful life. In the following three weeks, you will take a scientific and personal deep dive into topics such as autonomy, self-compassion, meditation, mindfulness, happiness, character strengths, optimism, post-traumatic growth, and resilience.

According to Positive Psychologists, every individual has the potential to be the “captain of their own sailboat”. Every single individual has unique strengths and an innate ability to face difficult weather circumstances.

In this course, we will unlock your character strengths and focus on helpful ways to support yourself in difficult times. We will cover the most important theories in Positive Psychology and you will be encouraged to go search for scientific literature to apply the topics we will cover to your specific areas of interest.

Autonomy is key in this course, so you will be encouraged every step of the way to be your own best guide in exploring the field.

In terms of assessment, you will be invited to write short blog posts about recent research findings, write a research proposal, personal growth paper, or literature review.

There will be ample room to gain hands-on experience with evidence-based positive psychological techniques ranging from simple journaling exercises to mindfulness meditation.

Looking forward to guiding, inspiring, and witnessing your growth this January,

Elke

Course structure

In this course, you will get acquainted with the field of positive psychology. In 3 weeks, you will take part in an intensive educational program that covers the most important topics of this field. Your positive psychology January course is a combination of lectures, experiential workshops, group meetings, and self-study.

Positive psychology is, first and foremost, a science and is principally concerned with evidence, measurement, and testing. Therefore, during this course, you will gain more insight in different theories, scientific findings, experiments and measurement tools. Interestingly, positive psychology is also an applied science, meaning that many of the scientific results lead to the creation of real-world interventions that can improve schools, businesses, governments, and other aspects of individual and social life. This practical side will also be part of the course. You will experience what it is like to participate in positive psychology interventions and learn how to apply different techniques to enhance subjective wellbeing.

During the course the following topics will be addressed:

1. General introduction to positive psychology
2. Mindfulness
3. Positive Emotions
4. Resilience
5. Self-determination theory
6. Positive psychology and health
7. Designing and conducting research in positive psychology
8. Applied positive psychology
9. Self-compassion
10. Positive psychology interventions
11. Positive psychology-based coaching
12. Acceptance and Commitment Therapy

Perhaps, some of the above listed topics may seem “soft” or maybe even “vague” at first glance and you may wonder how they fit in mainstream scientific psychology. As you will see, positive psychology researchers are very well able to study these “soft” themes with “hard” experimental methods. In addition, although the topics of positive psychology, such as happiness, may appear to be straightforward concerns, the scientific exploration of them is far from simple. A technical understanding of positive psychology, including the ability to critically consume the research literature and create studies and interventions that are within the bounds of the field, is a critical component in this course.

We selected these topics not only because they are at the core of positive psychology, but also because they concern relatively broad research areas. Within these topics, students are free to select their own sub themes and follow their own interests. In fact, we strongly encourage students to choose their own subtopics and search for their own literature. The topics will be addressed by means of lectures, tutorial group meetings, and workshops and assignments. See below for an overview.

Lectures

Week 1

Lecture 1:	Introduction to positive psychology	Elke Smeets
------------	-------------------------------------	-------------

Week 2

Lecture 2:	Positive Emotions	Elke Smeets
------------	-------------------	-------------

Lecture 3:	Self-determination theory	Elke Smeets
------------	---------------------------	-------------

Lecture 4:	Positive Psychology and health	Elke Smeets
------------	-----------------------------------	-------------

Week 3

Lecture 5:	Optimism	Elke Smeets
------------	----------	-------------

Tutorial group meetings

In total, there are five tutorial meetings. The meetings take 2 hours.

During these meetings, you will discuss a specific problem case. In total, there are 4 cases. During the pre-discussion, you brainstorm with your fellow students and discuss the problem at hand. You come up with so-called learning goals: one or more questions regarding the problem that you would like to answer in the next meeting. During the next meeting, you will discuss the literature you have read (post-discussion), and provide answers to the previously formed learning goals.

Week 1

Meeting 1: Pre-discussion case 1: Positive emotions (case: 'Cheer up!')

Introduction to research proposal / literature review / personal development paper.

Week 2

Meeting 2: Post-discussion case 1: Positive emotions

Pre-discussion case 2: Self-determination theory (case: 'Who's in charge?')

Meeting 3:

Post-discussion case 2: Self-determination theory

Pre-discussion case 3: Resilience (case: 'John & Mary')

Meeting 4:

Post-discussion case 3: Resilience

Pre-discussion case 4: Applied positive psychology (case: 'What would you advise?')

Week 3

Meeting 5:

Post-discussion case 4: Applied positive psychology

Advice on writing of research proposal or literature proposal

Workshops

The main goal of the workshops is to experience yourself what positive psychology research and interventions are about. The following workshops are offered.

Week 1

Workshop 1: Discover your character strengths. Elke Smeets

Week 2:

Workshop 2: From Fear to Freedom: Experiencing Acceptance and Commitment Therapy from the Inside out. Elke Smeets

Workshop 3: Self-compassion Elke Smeets

Week 3:

Workshop 4: Self-compassion part 2: breath work Elke Smeets

Workshop 5: Applying Positive Psychology Elke Smeets

Prerequisites

Some background in Psychology. Knowledge on designing a research study is helpful but not mandatory.

Class hours and credits

The course consists of 36 class hours divided over 3 weeks.

These hours consist of meetings, assignments, lectures, and practising positive psychology techniques throughout the course. In addition, write an extensive paper after classes are done.

Students earn 6 ECTS credits when they obtain a passing grade.

Disclaimer pictures and links used for this course

All pictures and links in this course manual are used for educational purposes only.

Chapter 2 Objectives

By the end of the course students will demonstrate knowledge about/the ability to:

Learning objectives & Skills development

Once you have completed this course, we wish for you to:

- Have a clear understanding of the goals and viewpoints of positive psychology.
- Have good overview of the different topics that are covered by the field of positive psychology.
- Be able to apply the knowledge that you gained during the course to “real life” situations.
- Have a clear overview of several practical techniques that can be used to uncover people's strengths and promote their positive functioning.
- Be acquainted with various research designs to test positive psychology related research questions.
- Be able to critically examine scientific evidence.
- Know the ins and outs of prevailing theories in the field of positive psychology.
- Write about your (research) ideas and experiences clearly.
- Be able to apply basic positive psychology coaching techniques.

Chapter 3 Course Coordinator

Hi everyone, my name is **Dr. Elke Smeets** and I will be your professor during this course.

I have been teaching Positive Psychology to international students at Maastricht University since 2011. I defended my Phd entitled "Bias for the (un)attractive self: on the role of attention in eating disorders and body dissatisfaction" in 2009. During my post-doc research, I became interested in investigating Self-Compassion and Positive Psychology interventions. I've developed a three-week Self-Compassion intervention for enhancing well-being and resilience among female college students (Smeets, Neff, Alberts, & Peters, 2014). Together with Kristin Neff, I've also developed a 6-week online Self-Compassion intervention for "Psychologie Magazine", a popular Dutch psychology journal. I've been working as a therapist and coach for the last 17 years.

Next to my work as a therapist, I've been training psychologists and other professionals in Acceptance and Commitment Therapy (ACT), Mindful Self-Compassion (MSC) and Positive Psychology. I'm one of the first certified Mindful Self-Compassion teachers in the world and have been co-teaching with Kristin Neff and Chris Germer in America and Europe. In June 2017, I've published her first book in Dutch. It's called "geluk en optimisme (happiness and optimism)" together with Professor Madelon Peters. The book describes a 7-week positive psychology intervention that I've developed during my Post-doc research at Maastricht University.

- elke.smeets@maastrichtuniversity.nl

Chapter 4 Assessment

The examination rules for this course are specified in the CES Academic Guide 2022-2023. It is the responsibility of the student to carefully read this document and comply with all rules and regulations.

Course specific assessment overview

For the attendance regulations see Chapter 5 "attendance rules".

When	Type of assessment	% Final grade
Throughout course	Attendance	Pass/fail*
1) 3x Popular scientific writing (DYKT's)	<ul style="list-style-type: none">• DYKT1: Fri 6 Jan• DYKT2: Fri 13 Jan• DYKT3: Fri 20 Jan	40%
2) Oral presentation	<ul style="list-style-type: none">• Presentation: Fri 20 Jan	15%
3) Final paper (research proposal, literature review or personal development paper)	<ul style="list-style-type: none">• Sun 12 Feb	45%

*** Fulfilled attendance is a condition for your final grade to be valid. For more information about the attendance, see Chapter 5 "attendance rules".**

Please note: Pass/fail elements related to assessments indicate that a "pass" for this part of the assessment is necessary in order for the grade to be valid. A "fail" indicates that that part of the assessment is incomplete.

When assessment is incomplete and no grade can be assigned (for example when students fail to do either the attendance, practical assignment or the course exam), 'No grade (NG)' will be awarded which automatically constitutes a "fail".

Attendance synchronous meetings

See Chapter 5 below regarding the specific attendance rules and regulations for this course.

Overview assignments

1) *Popular scientific writing*

Every week you will write a pointy “Did-You-Know-That? (DYKT)” about a recent research study (**published after 2012**) related to Positive Psychology. You are required to write three DYKT’s. The length of a DYKT is between 150 – 175 words. Your DYKT is written in comprehensible catchy language, aimed at a broad audience of non-psychologists. Your aim is to raise their interest and attention for positive psychology. You are completely free in the choice of your topic as long as it is related to positive psychology. Of course, your topic may be related to any of the weekly themes. Make sure to always end your DYKT with a catchy take home message for the reader. To give you an idea of what is expected of you, see the following example.

Did you know that:

Meditation can make your brain younger?

Most people are aware that meditation comes with health benefits, however recent research using MRI has discovered that it can also slow the rate your brain ages!

Researchers from LA and Canberra, examined the local and global cerebral gray matter of 50 long term meditators and compared it to 50 age matched non-meditators. MRI scans were used to gather data on the gray matter of the meditation group, whilst the International Consortium for Brain Mapping’s database of normal adults was used for the non-meditator data. After comparison it was apparent that frequent meditators showed less decline in their cerebral gray matter when compared to the non-meditator group. The brains of meditators still demonstrated decline however the rate was much slower than non-meditators. The researchers propose that this effect may occur because intense mental activity can stimulate dendritic branching and this increase in tissue may counteract the age related decrease normally observed.

So if you want to have a healthy looking brain, meditation might just be the key!

By Amy Brown

Reference: Luders, E., Cherbuin, N., & Kurth, F. (2015). Forever young(er): Potential age-defying effects of long-term meditation on gray matter atrophy. *Frontiers in Psychology*, 5. doi:10.3389/fpsyg.2014.01551

Please email your DYKT to your tutor before midnight on Friday (Maastricht time) each week of the course. Make sure to write your name and DYKT1, DYKT2 or DYKT3 in the file name of your word document.

2) *Oral presentation*

The research proposal entails another important aspect of the course. Besides writing the proposal, you will also get the opportunity to share your creativity with your fellow students. You will present, oral presentation, your research ideas during the scientific symposium at the end of the course.

3) *Final paper - Research proposal, literature review or personal development paper*

The final assignment of this course is a research proposal, literature review, or personal development paper.

A research proposal is a description of a study that you are hypothetically going to perform in any domain of positive psychology. You are completely free in your subject choice as long as it is related to positive psychology. You can also choose any methodology that you deem appropriate for answering your question: an experiment, a longitudinal cohort study, observational study, intervention study, etc.

The 2nd half of the first group meeting will be devoted to discuss the proposal and brainstorm about potential topics.

Write your proposal as if it was intended for a review board of a funding agency. Although you are not actually going to execute the study, make sure that it is feasible in principle given enough time and money. The proposal should contain an abstract, introduction, a method section and references. In the introduction (2-4 pages) you give the theoretical background to your topic describing what is already known and what is still unknown. This should logically lead to the research question of your study.

Structure your method section like the method section of a research paper: describe the number and type of participants in your study, the measurement instruments you are going to use, the procedure (e.g., the intervention, the experimental manipulation, etc.), and how you are going to analyze your data. Formulate clear and testable hypotheses. Use at least 6 original references (or as many as appropriate).

If you feel more comfortable writing a literature review, then you are invited to write a nicely structured overview of a positive psychology topic that particularly interests you. Make sure to also start from a specific "question" and try to answer it with the literature you discuss.

Another option is to write a personal development paper in which you report on your personal experiences with a number of self-chosen positive psychology exercises. Make sure to provide a rationale as to why you chose these particular exercises and report on relevant scientific findings that support them.

Please follow the following rules for your final paper:

- 1. Word count: minimum of 2250 words and a maximum of 2700 words** (including explanatory footnotes, but excluding literature list). The abstract should be no longer than 250 words.
- 2. Minimum of 15 references**
- 3. Deadline: Sunday 12 February 2023, 11.59pm (CET).**

- 4. Submission method:** Your final paper needs to be submitted electronically via Safe Assignment on the Maastricht University student portal. After the plagiarism check, your CES programme coordinator will send your paper to professor Elke Smeets (Elke.smeets@maastrichtuniversity.nl) for grading purposes.
- 5. Font and outlook of the paper:**
- a. Times New Roman
 - b. Font size 12
 - c. 1.5 line spacing
 - d. Justified outlining
 - e. Pages should be numbered
 - f. Format: Word document
 - g. Please don't forget to proofread your paper carefully for spelling and grammar.
- 6. Title page:**
- a. Name
 - b. Student number
 - c. Title
 - d. Date of handing in the paper
 - e. Number of words (contained in the **text** (title page and literature list are not included)
- 7. Plagiarism:** (see related dedicated chapter in the CES Student Handbook) CES checks all papers for plagiarism with help of "Safe Assignment" – please note that it is therefore not allowed to use extensive quotations in your paper and that proper reference rules must be followed at all times. In cases where (parts of) the paper clearly come from someone else's work and or the internet and are not quoted as such, sanctions will be taken. Depending on the severity of plagiarism, sanctions will go from taking a certain percentage off the final grade to full failure of the course.

For every rule mentioned above which you don't comply with, 5% of your final grade will be taken away. An additional 5% of the final grade will be taken off for every 24-hour delay.

For example:

John received an 8 for his paper.

However, he forgot to number the pages, and handed it in three days late.

5% of his grade is 0.4.

His final grade will be $8 - 0.4$ (rule 4e) $- 1.2$ (rule 2) = **6.4**

The paper should be submitted electronically at the latest on **Sunday 12 February 2023, 11.59pm (CET)** via Safe Assignment on the Maastricht University student portal.

The grade will be given within four weeks after the submission of the paper.

Resit options

Students are entitled to a resit if they receive a failing final grade (5.4 or lower) and have made a significant attempt at all assessments. It is not permitted to do a resit in order to get a better grade if a student has already completed the course with a passing grade. After

a resit, the highest grade will be considered the final grade. For example, if a student obtained a 5.3 as their original final grade and then received a 4.7 for the resit, the transcript will list 5.3 as the final grade for the course. When assessment is incomplete and no grade can be assigned (for example when students fail to do either the mid-term or the final exam), NG (no grade) will be awarded which automatically constitutes a "fail".

The resit examination is only available for students who have complied with the compulsory attendance requirement and made a significant attempt at all assessment components. Students must formally request a resit within 10 days of receiving their final grade by emailing ces-educationoffice@maastrichtuniversity.nl. Resits must take place within the same academic year as the initial exam and are made at the discretion of the course coordinator and the Board of Examiners.

Please note that the resit can only take place after the final grade is determined.

The exact form and date of the resit will be determined in further communication with CES and the course coordinator. Please note that the resit can only take place after the final grade has been established.

How to use and refer to the literature

You should concentrate on analysing the chosen text and readings. However, you are also encouraged to use additional literature, as available at the CES reference library, the University library or the internet.

If you quote directly (from the text) or indirectly (referring to the contents of a text), you should indicate this clearly, stating author, title, editor, date of print, and page-number(s). Additionally, you need to list all literature used for your paper (primary and secondary) at the end of your paper.

IMPORTANT: please use the most recent update of APA guidelines for quotes and references. Please also refer to the University Library's Endnote page and Copyright Information Point for more information on how to avoid plagiarism and the proper use of citations.

All submitted papers will be checked with an anti-plagiarism programme. In cases where (parts of) the paper clearly comes from someone else's work and or the internet, not being quoted as such, sanctions will be applied. Depending on the severity of plagiarism, sanctions will go from taking a certain percentage off the final grade to full failure of the course (please also refer to the CES Student Handbook for more information).

How to hand in papers

All written papers need to be submitted through **Assignments** on Canvas before the deadline.

IMPORTANT: Please make sure that your paper adheres to all necessary requirements before handing it in to avoid sanctions. There is an example CES paper template available via the Student Portal for your information.

Sanctions

An additional 5% of the final grade will be taken off for every 24-hour delay. There is a 10% allowance either side of the word count. Any more or less than 10% may result in further deductions to the final grade.

Chapter 5 Attendance rules

The attendance rules for this course are specified in the CES Student Handbook 2022 -2023.

Course specific attendance rules

At CES, students are expected to attend all meetings. If circumstances prevent students from complying with this rule, **they are permitted to miss one meeting per course**. For a second missed meeting, or a missed double session or fieldtrip (4 hours), students need to complete a make-up assignment to comply with CES attendance requirements. **Students who miss more than 4 hours of class automatically fail the course.**

CES courses may include field trips. Field trips may contribute to the overall grade of a course and are always mandatory. Students can compensate for a missed field trip by completing a make-up assignment. Please note that often field trips count as two meetings (4 hours).

The professor/tutor notes attendance at the start of each meeting. In order to be registered as "present" students need to be on time and participate in an active manner. Students who are more than 15 minutes late or who leave before the meeting has officially ended will be registered as absent.

In case of absence due to illness or other personal circumstances, students are required to email the course coordinator and the education office **before the start of the meeting**. The written notification should include the students name and a brief description of the reason or cause and the expected duration of the absence.

In case of longer absence, the programme coordinator may require additional proof of the cause of the absence, for example a doctor's note. When the student returns, they must report to the programme coordinator on the first day of their return. CES cannot be held responsible if a student fails a course due to long-term absence, even if this absence is due to illness or other exceptional personal circumstances.

Make up assignment

Students who miss 4 hours of class will not have met the attendance requirements of a CES course and can apply for a make-up assignment to comply with the CES attendance requirements. Students who miss more than 4 hours of class automatically fail the course.

The student is required to submit a written request to ces-educationoffice@maastrichtuniversity.nl within 3 days after the missed meeting. The CES Board of Examiners will decide upon the validity of the reasons given. The CES course coordinator determines the nature and volume of the assignment, which will be proportional to the number of missed meetings and the topics discussed. Make up assignments related to missed field trips may require students to do the excursion independently and at their own expense. The assignment must be completed and submitted to the CES course coordinator via email within 10 working days.

The responsible CES course coordinator will grade the make-up assignment with a pass or fail. Students who receive a pass for the make-up assignment will have met the attendance

requirement. No final grade can be awarded for courses in which students have not met the attendance requirement. This will result in a "No Grade (NG)" on the transcript. An "NG" automatically constitutes a "fail" and no credit is awarded.

Electronic devices

Please be mindful about the use of smartphones and laptops during this class. They are only allowed to take notes or to look up notes for the tutorial meetings. Students will be asked to close their laptops at times when it poses a distraction to the teachings and discussions. Make sure to also bring a notebook to class so you can make handwritten notes.

Chapter 6 Literature and online environment

Literature per meeting

Each meeting has relevant literature. In the specific overview per meeting in this Course Manual and on Canvas, you can find a detailed description of all relevant readings for each meeting. The literature of the current course has been carefully selected by your course coordinator to match the learning goals of this course. Most articles are accessible via **Google Scholar** and **Science Direct** if you login with your UM student account via the UM library site (<https://library.maastrichtuniversity.nl/>). Some sources are made accessible via this course Canvas page in the reference list. Feel free to search for extra relevant materials in other databases to complement your studies.

Main literature

This course will address a wide range of topics. Within these topics, students are free to select their own sub themes and follow their own interests. This means that you are free (in fact we strongly encourage you) to search for your own literature. The references that belong to each of the problems and workshops can best be perceived as optional readings. They may function as a nice starting point, but they are by no means mandatory or considered as the only available options. Since you will have access to the (online) library of Maastricht University, you will have a very large number of articles and books at your disposal.

OBS: Keep a close eye throughout the course on both StudentPortal/Canvas and your UM e-mail to remain informed.

Chapter 8 Classes and content

Specific overview of topics per meeting including tasks

Below you can find a detailed description of the classes, organised per week, specific date, and meeting.

Tip: go through the complete course manual, writing down important dates and activities in your own calendar.

Problem-based learning guidelines

Discussion guidelines ("seven jump")

Step 1	Clarification of terms
Step 2	Problem definition
Step 3	Problem analysis
Step 4	Systematic inventory
Step 5	Formulate learning objectives
Step 6	Self study
Step 7	Report and synthesize

Roles in the tutorial group

The tutor (professor)	monitors the process and the content.
The discussion leader	leads the discussion/process: summarizes, activates, asks questions, takes care of the participation.
The group members	participate and prepare.

Week 1, 04-01-2023

Lecture 1	Introduction in Positive Psychology
Meeting 1	Positive Emotions & Introduction to research proposal/literature review/personal development paper.
Hour 1:	Pre-discussion problem case 1 "Cheer up!"
Hour 2:	Introduction to research proposal/literature review/personal development paper.

Problem case 1 Cheer up!

Susan and Jane are meeting after class.

Susan: So, what did you get for your birthday? I got this cool book on positive mindset. You should really read this.

Jane: All this positivity, I think it is overrated. It begins to feel like tyranny to be happy. I think people who are cheerful and happy all the time are just being ignorant and shallow. Look around you, what is there to be happy about?

Susan: Come on, don't you think it is much nicer to feel good? Don't we all want to be happy?

Jane: There is no purpose in being happy. Positive people only think about themselves and don't contribute to society. It is an egocentric, small-minded western way of thinking. Besides, don't you know that depression is the key to creative genius? Look at all those great writers with a depression: Virginia Woolf, Hemmingway, to just name two. They would never have reached such profoundness in their work had they indulged in their happiness.

Susan: I don't agree! Positive emotions make you more broad-minded and let you reach out to people. All this negativity is what destroys our world. The anger, the hate, people who fear others with a different color or religion. You'd better ask: what good are negative emotions, we could do without them.

Jane: Huh! You think so? If you had paid attention during class, you'd know that negative emotions serve a function. Fear focuses our attention on danger and urges to fight or flight. In an evolutionary perspective they are very important. Mankind would not have survived without negative emotions. But positive emotions are useless.

Susan: Ah....I won't argue with you anymore. You must be born with bad temper genes – no use in trying to cheer you up!

Week 1, 05-01-2023

Workshop 1

Discover your character strengths

Positive psychology has produced a number of types of interventions that, taken together, form a scientific toolbox that coaches can add to their existing practices.

Positive psychology also provides new assessments of which coaches can avail themselves. There are well-validated surveys of character strengths, optimism, life satisfaction, and many other topics that are directly relevant to coaching.

In this workshop you will discover your character strengths and find ways to use them more frequently.

Week 2, 10-01-2023

Lecture 2
Meeting 2

Positive Emotions
Positive Emotions & Self-determination theory

First 1 hour:

Positive Emotions – Post-discussion problem case 1 “Cheer up!”.

Last hour:

Pre-discussion Who’s in Charge

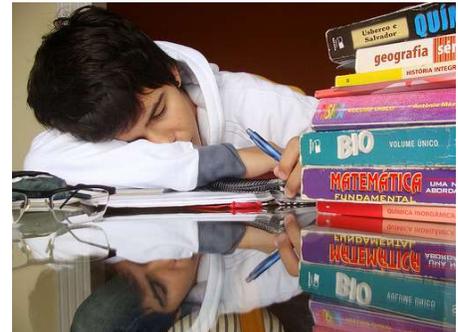

Problem case 2 Who’s in Charge?

John and Sandy are both students at the faculty of Psychology and Neuroscience in Maastricht. But they are different:

Sandy is having a great time. Waking up is no problem, because the mere thought of meeting her fellow students as well as reading and talking about psychology gives her enough energy to start a new day. Time flies, completing the first year was done in the blink of an eye.

John is having a lot of trouble. The very thought of getting up in the morning and having to attend the group meetings, reading the literature, and talk about psychology makes him want to stay in bed for the rest of the day. If only these four years were over, life could finally start.

Week 2, 11-01-2023

Lecture 3	Self-determination theory
Meeting 3	Self-determination theory & Resilience
First hour:	Post-discussion case 2 "Who's in charge?"
Last hour:	Resilience – Pre-discussion case 3 "Jake and Mary"

Problem case 3 Jake and Mary

Jake, 34 years old, married and father of 2 children, was diagnosed with Hodgkin's lymphoma in 2007. Mary, 36 years old, divorced and single, was diagnosed with breast cancer in 2008. After 1 year of intensive chemotherapy and radiation therapy both Jake and Mary were diagnosed as being "cured". However, Jake had a hard time resuming his work, picking up his hobbies, and he could no longer enjoy his family life to the same extent as before. He suffered from ongoing anxiety, lethargy, ruminative thoughts and minor illnesses. 8 Months after being diagnosed as "cured" Jake was enrolled into a treatment program for depression.

During her illness, Mary did not stop working at all, she tried to maintain her hobbies, and she even managed to enjoy the presence of her friends and family every once in a while. After being diagnosed "cancer free" she felt happier than ever, she picked up playing the piano again, was more energetic than ever before, and attracted many new friends.

Week 2, 12-01-2023

Lecture 4
Workshop 2

Positive Psychology and health
Getting unstuck: from fear to freedom. Applying
Acceptance and Commitment Therapy from the inside out.

We are creatures of habit and change is often hard. Remember all those well intended New Year's resolutions that were never really actualized? Often times we think "if only I had more confidence" it would all be so much easier. But is it really the case that we can only act once we have the right amount of confidence? In this workshop you will be introduced to an interesting approach to step outside of your comfort zone with greater ease. You will explore some of the greatest blocks to behavioral change and will learn about state-of-the-art Acceptance and Commitment therapy techniques to help you unhook from unwanted thoughts, make room for difficult feelings and live more in line with your personal values.

Week 2, 13-01-2023

Workshop 3 Self-compassion

When we are confronted with failures, or with things we don't like about ourselves we often beat ourselves up. And whereas we would be kind and understanding towards a friend who is having a difficult time, we are harsh and critical towards ourselves.

Recently, self-compassion has been identified as a promising way to cope with life's difficulties. It entails self-kindness (expressing kindness and understanding towards one's own suffering), common humanity (realizing that imperfection and failures are part of the shared human experience), and mindfulness (keeping a balanced and open awareness on one's difficult emotions). Recent research has shown that self-compassion is related to enhanced emotional well-being, and reduced anxiety and depression.

This workshop will provide you essential tools for treating yourself in a kind, respectful, and compassionate way whenever you fail, suffer, or feel inadequate. Theory and core skills of the Mindful Self-Compassion program will be discussed and practiced.

Meeting 4 Resilience & Applied Positive Psychology

Hour 1: Post-discussion problem case 3 "Jake & Mary"

Hour 2: Applied Positive Psychology – Pre-discussion case 4 "What would you advise?"

Problem case 4 What would you advise?

During the past few weeks, you learned the ins and outs of different theories that address optimal human functioning. These theories not only provide more insight in the processes that underlie subjective wellbeing, they can also be translated into practical guidelines. In other words, many of the findings of research on positive psychology can be used to help people.

Take a look at the stories displayed on the following pages:

CONTEXT : CLINICAL

My life is a mess. I am 25 years old, I see many people around me, being happy, being involved in a relationship and knowing exactly what they want. None of these things apply to me. First of all, I am not happy. If I had to describe how I feel, I would say "down" and "low" and "hopeless" for weeks at a time. The problem is, this is not something I can seem to just pull myself out of. This is not the life I wanted. I often compare myself to others, which makes me feel even worse. I feel drained, mentally exhausted. I live in constant worry. I worry that I am unable to complete my work in time. I worry that I may never find somebody to love. I worry that I will never find a purpose in life. Let's be honest. I am 25 years old, I am still single and I am not sure what I want to do for the rest of my life. My job is ok. It pays the bills, but that's about it. I feel like my boss is constantly watching my back, and I can't stop thinking about work when I am at home. I don't have any hobbies, besides watching netflix. In sum, I am a complete failure.

CONTEXT : SPORTS

Two years ago, I received a sports scholarship. I was recruited by a university coach who considered me to be a "talented athlete". Of course, I was really happy with this opportunity. Now, being a tennis player at Princeton University for two years, I have to admit that it is hard. Maybe the hardest part is not the sport itself, but dealing with setbacks. I made a great start. During the first year, I won a lot of matches, but this success was not built to last. In the second year, I started to lose some matches. In the meantime, I also started to lose confidence in my abilities. Often, I hear myself talking "I am just not good enough" and sometimes I even think that I am a total clod at sports. The pressure is killing me. Sometimes even a week before the start of a new match, I am getting caught by feelings of anxiety. During the match I am having trouble concentrating. I get distracted really easily. At this point I am seriously considering to quit sports. Although I love playing tennis, I am really having a hard time staying committed. It's not about wanting to reach my goals, it's about believing, I guess.

CONTEXT : WORK

Being the CEO of a big telecom company, I have been facing some serious problems during the last two years. First of all, there is a strong increase in absence through illness. In addition (probably related to this), productivity rates are decreasing. Although I do not

spend much time talking to my employees, I hear some rumors that many of them suffer from stress. I hear that some of them complain about a misbalance between work and family. At the same time, others seem to experience a lack of both challenge and commitment. Since these two stories are quite dissimilar and alarming at the same time, I think something needs to change. However, I am not a psychologist, I am a leader. Consequently, I am not sure how to deal with this.

CONTEXT : COACHING

I am 28 years old and I am quite happy with my life. I have a nice boyfriend; I meet my friends often and I am passionate about playing guitar. Although I am aware that there is not much to complain, I do feel that I am struggling for a couple of years now. I am pretty sure this has to do with my current job. I am a researcher at the University of Manchester. Six years ago, when I started with my PhD research, I was a completely different person at my work than I am now. I thought I could make a difference, I truly believed that my job would contribute to the overall wellbeing of people on this globe. However, I soon noticed that my impact was limited. I spent lots of hours behind my computer, writing articles that, in the end only few people seemed to read. Those who have access to my articles are not the ones who translate my knowledge into practice. I barely receive any comments on all the work I do. I feel like contributing a tiny little bit to a massive puzzle. In addition, because of the financial crisis, many of my colleagues have lost their jobs. Consequently, fear and competition seem to rule at our faculty. I could definitely need some personal advice.

Imagine that you are either a clinician or coach who strongly relies on positive psychological interventions to help his/her clients. Choose one of the four above displayed problems. For the next meeting, try to answer the following question: What kind of advice would you give?

You can use the basic text book, or search for new literature and may use both the theories and findings presented during this course as well. Good luck!

Week 3, 16-01-2023

Workshop 4 Self-compassion part 2: breath work

Lecture 5 Optimism

Week 3, 17-01-2023

Lecture 6 Positive Psychology Interventions

Meeting 5 Applied positive psychology & Advice on research proposal/literature review/personal development paper

First hour: Post-discussion problem 4 "What would you advise?"

Last hour: Advice on research proposal, literature review, or personal development paper.

Week 3, 18-01-2023

Workshop 5 Applying Positive Psychology

Appendix 1 Evaluation criteria research proposal

Research question

Originality

Interest

Rational (following from introduction)

Clear and testable hypotheses

Scientific content

Appropriate theoretical background

Correct and clear description of prior research

Appropriate use of - and reference to - literature sources

Sufficient depth

Logically valid reasoning

Methodology

Appropriate design to test the research question

Motivation of number and type of participants

Clear and correct description of procedures/intervention etc.

Appropriate outcome variables / assessment instruments

Proper data analytic procedures

Form

Readability / story line

Appropriate section headings

Proper use of references in text and in reference list (e.g. APA style)
